Career Objective

Seeking opportunities in software engineering, game development, or mobile app development where I can apply my academic knowledge, project experience, and problem-solving skills while continuing to grow professionally.

Education

Bachelor of Science in Computer Science and Engineering 2025 [December]
University of Asia Pacific, Dhaka
CGPA: 3.51 / 4.00

Higher Secondary Certificate (HSC) 2020
Dhaka City College | GPA: 5.00 / 5.00

Secondary School Certificate (SSC) 2018
Shamsul Hoque Khan School & College | GPA: 5.00 / 5.00

Technical Skills

Programming Languages: Python, C, C++, Java, Kotlin, C#, SQL, HTML, CSS
Tools: Unity, Godot, Blender (Basic), VS Code, Visual Studio
Version Control: Git, GitHub, Unity Version Control (Plastic SCM)
Frameworks: Django, MySQL
Other Tools: Canva, Photoshop, Microsoft Office

Game Development Projects

Third Person Shooter Prototype (Unity)

Developed a 3D shooting prototype featuring player movement, combat mechanics, and interactions. Used Unity Starter Assets, DOTween, and Cinemachine for gameplay systems and camera control.

GitHub: github.com/RahatAlamgir/Third-person-shooter-prototype.git
YouTube: https://youtu.be/QGNqRSfj12A

2D Platformer Prototype (Godot)

Created a 2D platformer prototype focused on precision movement, jump physics, and player control systems. Inspired by Hollow Knight style of movement and gameplay feel.

YouTube: https://www.youtube.com/watch?v=28O3mSs0PSc

Pacman Game (C++)

Implemented a Pacman-style game using C++ with movement logic, collision handling, and scoring mechanics.
GitHub: https://github.com/RahatAlamgir/Pac-man

Bounce Ball Game (C++)

Built a simple interactive game in C++ focusing on game loop logic, collision behavior, and controls.
GitHub: https://github.com/RahatAlamgir/2D-Bounce-Ball

Software & Academic Projects

Fast Line Follower Robot

Built an autonomous robotics project using Arduino, QTR sensors, and motor drivers. Focused on line detection, movement logic, and speed optimization for competitions.

RideSchedule (Django Web App)

Developed a scheduling platform for riders and drivers using Django and MySQL. Implemented user authentication, schedule management, and database operations.

GitHub: https://github.com/RahatAlamgir/RideSchedule

Hospital Management System (Java)

Created a desktop application to manage patient records, appointments, and hospital information. Applied object-oriented programming concepts and Java GUI fundamentals.

XR Privacy Vulnerability Assessment (Thesis)

Worked on a research project analyzing XR head and hand motion data. Focused on identifying privacy vulnerabilities using machine learning techniques.

Mini-Compiler (Python)

Developed a lightweight compiler from the ground up that translates C-like source code into assembly. The engine handles type-system validation for **int**, **float**, **bool**, and **char** variables,

processes basic arithmetic operations, and maps control-flow elements such as **if-else** and **while** loops to low-level logic.

GitHub: https://github.com/RahatAlamgir/Mini-Compiler

Python Mini Projects

Developed utility tools, including

- Image to PDF converter
- Excel to JSON converter
- Image Resizer
- Auto Clicker

Focused on GUI design, file handling, and productivity workflows.

GitHub: https://github.com/RahatAlamgir/Python-Mini-Project

Blender Projects

Build some 3d model from YouTube tutorial

- Beginner Donut Tutorial
- Low Poly Well
- Low Poly Island tree house
- Pencil

Work Experience

Goat Esports
Web & Broadcast Operations Support (14 days)

- Assisted in monitoring web systems and broadcast-related operations
- Worked in a live esports production environment
- Observed workflow related to web operations and technical support

Achievements

- Dean's Award Recipient (3 times)
- KUET BitFest 2025 – Line Following Participant
- National Robotics Championship 2025, BUBT – Participant
- Robo Expo 2.0, UAP 2024 – Participant

Languages

- Bangla – Native
- English – Fluent
